Wonderful World of Sports 10: 25 Pattern Designs in Plastic Canvas Jul 26 2020 Wonderful World of Sports in Plastic Canvas is filled with 25 sports-themed plastic canvas designs. Each book contains a variety of assorted different sports related pattern designs. Each pattern requires 1 sheet of plastic canvas mesh measuring 70 holes x 90 holes. Each pattern features a full color graph showing stitch placement using a continental stitch, and our easy match color key. Stitch these plastic canvas patterns using 7 count plastic canvas mesh, and medium or worsted weight yarn. Plastic canvas is a variation of needlepoint and other canvas work crafts, such as embroidery. Our patterns are designed to use acrylic or wool based yarns in medium or worsted weights. Because plastic canvas mesh is so rigid, it is perfect for creating 3-dimensional objects such as tissue box covers, small jewelry trinket boxes, handbags, magnets, dolls, vases, napkin holders, wind chimes, and many other types of both decorative and useful items. Dancing Doilies Patterns have full instructions, and large full color charts. Plastic canvas comes in different colors and with various size holes for different thicknesses of yarn. As with any textile canvas, the hole size is called count. For example, 10-count plastic canvas mesh has 10 holes per linear inch. The most common sizes are 5, 7, 10, and 14 count. It is sold most often in sheets; pre-cut patterns are available in circles, triangles and novelty shapes such as butterflies, hearts, and stars. Our patterns are designed using 7 count plastic canvas mesh.

What's Changing: Population Size Or Land-use Patterns? Apr 28 2020

The Upper Mangrove Creek catchment was an ideal locality in which to undertake field investigation into Aboriginal use of the coastal hinterland. The area, 100 square kilometres in size, is rich in sites that provided significant archaeological evidence of Aboriginal use of the coastal hinterland. The catchment became the focus of major archaeological salvage work in the 1970s, prior to the construction of the Mangrove Creek Dam. Further research, undertaken by Val Attenbrow, on the total catchment expanded on the results of earlier work. This monograph describes the later research project and summarises the salvage program results. This evidence is used by the author to explore current research issues relating to the interpretation of the mid- to late-Holocene archaeological record in Australia, particularly quantitative changes relating to population numbers and aspects of human behaviour, such as risk management, subsistence, mobility and land-use patterns.
