The names Bloch and Geitner are synonymous with machinery maintenance and reliability for process plants. They save companies like Dow and Equilon millions of dollars a year by extending the life of rotating machinery in their plants. Extending the life of existing machinery is the name of the game in the process industries, not designing new machinery. This series by Bloch and Geitner was the first and is still the best, most comprehensive source for doing just that. This classic text on reliability has been revised to include all new material on risk management, pre-grouted bases, laser alignment, cartridge seals maintenance, and many other topics which have undergone many developments since the last revision. Helps engineers save their companies hundreds of thousands of dollars a year by reducing machinery downtime Now in its third edition, with a twenty-year history of success Details the money-saving techniques used by many of the world's leading companies, including Exxon, DuPont, Dow, and dozens of others Machinery Component Maintenance and Repair, Fourth Edition, Volume three in the Practical Machinery Management for Process Plants series provides the latest research and industry approaches in easy to understand, bite-sized chunks. Extending the life of existing machinery is the name of the game in the process industries, and this classic text is still the best, most practical and comprehensive source for doing just that. This updated edition is completely revised and updated throughout, especially in sections regarding Maintenance Organization and Control for Multi-Plant Corporations, Repair and Maintenance of Rotating Equipment Components, and Protecting Machinery Parts Against Loss of Surface. Describes step-by-step procedures to guide readers through a best practices approach to machinery maintenance Helps readers optimize their maintenance plan to reduce downtime in plants and extend the service life of machinery Provides a wealth of practical technical data and advice on crucial subjects, such as machinery alignment and maintenance programming The TMS 2015 Annual Meeting

Supplemental Proceedings is a collection of papers from the TMS 2015 Annual Meeting & Exhibition, held March 15-19 in Orlando, Florida, USA. The papers in this volume represent 33 symposia from the meeting. This volume, along with the other proceedings volumes published for the meeting, and archival journals, such as Metallurgical and Materials Transactions and Journal of Electronic Materials, represents the available written record of the 73 symposia held at TMS2015. This proceedings volume contains both edited and unedited papers; the unedited papers have not necessarily been reviewed by the symposium organizers and are presented "as is." The opinions and statements expressed within the papers are those of the individual authors only, and no confirmations or endorsements are intended or implied.

Annotation New edition of a reference that presents the values of properties typical for the most common alloy processing conditions, thus providing a starting point in the search for a suitable material that will allow, with proper use, all the necessary design limitations to be met (strength, toughness, corrosion resistance and electronic properties, etc.) The data is arranged alphabetically and contains information on the manufacturer, the properties of the alloy, and in some cases its use. The volume includes 32 tables that present such information as densities, chemical elements and symbols, physical constants, conversion factors, specification requirements, and compositions of various alloys and metals. Also contains a section on manufacturer listings with contact information. Edited by Frick, a professional engineering consultant. Annotation c. Book News, Inc., Portland, OR (booknews.com). In an overlooked area of welding, this book is an extremely practical and down-to-earth money-saving guide to repair of moulds, tools and dies, from buying the most suitable material and equipment to completing complex repair work. It offers simple, step-by-step, user-friendly advice on all aspects of a task where quality is paramount and the selection of the correct welding techniques essential. The text reflects a strong enthusiasm for the task in hand from an author who has many 'tricks of the trade' to share. His book is an essential resource for Tool Room managers and foremen as well as maintenance and repair welding specialists. Provides a summary of the projects the Air Force MANTECH Directorate has in progress or has completed within the last 10 years. Its purpose is to promote the transfer of technology which was developed through these investments into the defense industrial base. If you are involved with machining or metalworking or you specify materials for industrial components, this book is an absolute must. It gives you detailed and comprehensive information about the selection, processing, and properties of materials for machining and metalworking applications. They include wrought and powder metallurgy tool steels, cobalt base alloys, cemented carbides, cermets, ceramics, and ultra-hard materials. You'll find specific guidelines for optimizing machining productivity through the proper selection of cutting tool materials plus expanded coverage on the use of coatings to extend cutting tool and die life. There is also valuable information on alternative heat treatments for improving the toughness of tool and die steels. All new material on the correlation of heat treatment microstructures and properties of tool steels is supplemented with dozens of

photomicrographs. Information on special tooling considerations for demanding applications such as isothermal forging, die casting of metal matrix composites, and molding of corrosive plastics is also included. And you'll learn about alternatives to ferrous materials for metalworking applications such as carbides, cermets, ceramics, and nonferrous metals like aluminum, nickel, and copper base alloys.
