The left common carotid and left subclavian arteries arise directly from the aortic arch. The 2 common carotid arteries bifurcate into the internal and external carotid arteries. The anterior circulation of the brain includes the distal branches from the internal carotid artery, including the anterior cerebral artery and the middle cerebral artery. Comprehensive Review in Clinical Neurology May 16 2022 "In neurology perhaps more than any other specialty, clinical vignettes increase learning efficiency by illustrating examples and placing sometimes challenging neuroscience concepts into clinical practice. With this in mind, the majority of questions in this book are case-based. A multitude of radiographic and pathologic images are carefully selected to supplement information in the cases while also contributing to knowledge of these respective areas. The anatomic diagrams and other graphics provide visual aids to consolidate information presented in the discussions. The book is organized so that the reader can review chapters in their entirety or select individual questions from each chapter for review. Despite the Q & A format, topical review is possible with this book as well: the chapters are organized by topics, the index is comprehensive, and most importantly, reference is made in the discussion to different questions related to a specific concept. This book is strengthened by the renowned specialists who painstakingly reviewed the chapters and contributed valuable suggestions and images"--Provided by publisher.

Neurology Oral Boards Review Aug 27 2020 It was 6 AM and the New Orleans Hilton lobby was dotted with young neurologists in suits wandering aimlessly, many mumbling to themselves, all with the eyes of a rough night on call. This was the morning of my Oral Board examination. Despite three years as a neurology resident, additional time as a fellow, and the experience of having performed probably more than 1000 neurological examinations by this time, I was deathly afraid of what this day would bring. The exam organizers had met with us the day before and given the overwhelming message to "RELAX." Certainly,

this is sound advice prior to any examination, but the requisite for passing is knowing the material. This requires preparation, as well as practice. An excellent first step is to use Eroboghene Ubogu's Neurology Oral Boards Review in the months before you begin studying for the Boards in earnest. A quick read will provide an internal assessment of your strengths and weaknesses, which should guide the study plan. The major neurology textbooks, which anyone sitting for the Boards should already have in their possession, should be studied. Finding a senior faculty member to quiz you is very helpful. There is no substitute for finding one of your former residency supervisors or a senior colleague in your group practice to perform a simulated Oral Board session.
